SHORT-FORM VIDEO

Everyone Is Talking About AI Agents. But What Can They Actually Do?

Platform
Instagram Reels

Duration
45–60 seconds

Topic
AI, business automation, and practical applications

HOOK
0–5 sec

“Imagine hiring someone who can research a potential customer, organize the information, and prepare a follow-up - without you managing every single step. That’s the idea behind AI agents.”

PROBLEM
5–17 sec

“Most of us use AI to ask questions, generate ideas, or write emails. But that still leaves us doing the actual work of moving from one task to the next.”

INSIGHT
17–35 sec

“AI agents take things a step further. Give an agent a goal, and it can plan the steps, use connected tools, and work through a multi-step task.

For example, a sales team could use an agent to research incoming leads, organize relevant details in a CRM, and prepare personalized follow-up drafts.”

TAKEAWAY
35–48 sec

“But here’s the catch: an AI agent is only as useful as the workflow it’s given, the tools it can access, and the checks in place to catch mistakes.”

CLOSING
48–55 sec

“So don’t ask where you can add AI. Ask which repetitive workflow is worth improving first.”

Production notes

- **Opening:** Direct-to-camera delivery. Pause briefly after the opening question.
- **Visuals:** Show a simple sequence of a lead arriving, information being researched, details being organized, and a follow-up draft being prepared.
- **On-screen text:** “Research → Organize → Prepare”
- **Pacing:** Use quick cuts during the example, then slow down for the takeaway.
- **Closing:** Return to direct-to-camera delivery and emphasize “which workflow.”
- **Editing:** Clean captions, minimal transitions, and no unnecessary technical animations.

AI agents aren’t just about getting answers from AI. They’re about using AI to move through multi-step workflows.

The real starting point isn’t adopting the latest tool. It’s identifying a repetitive process, deciding what can be delegated, and keeping the right checks in place.
